

Mixed-Cation Validation Report

Editable local report test

The leading formulation remains FA0.90MA0.10.

CHOSE Centre for Hybrid and Organic Solar Energy | Matteo Ginesi

EDITABLE REPORT IDENTITY

Report title

Author / laboratory

Approval state

Contents

Objectives, materials and methodology	03
Solutions and device stack	04
Results, chart and measurement table	05
AI findings, conclusions and approval	06

Evidence classes

HUMAN	Objectives, notes, conclusions and approval
RAW	Source-aligned measurement values
CALCULATED	Normalized values, comparison and KPI
AI	Simulated advisory findings with evidence and status

Editable research narrative

Research objectives

Methodology

Evidence boundary

These fields remain editable in a compatible PDF reader. Changes do not alter the source project package.

Solution composition

FA/MA 1.25 M reference SOL-B04

DMF 80%	DMSO 20%
---------	----------

FAI 365.3 mg 90 mol%	MAI 39.7 mg 10 mol%	PbI2 1152.5 mg 1.00 eq
-------------------------	------------------------	---------------------------

Device stack STK-003/v2

05	Au	Back contact	80 nm
04	Spiro-OMeTAD	Hole transport	180 nm
03	FA/MA perovskite	Absorber	540 nm
02	SnO2	Electron transport	32 nm
01	Glass / FTO	Substrate/contact	2.2 mm

Validation

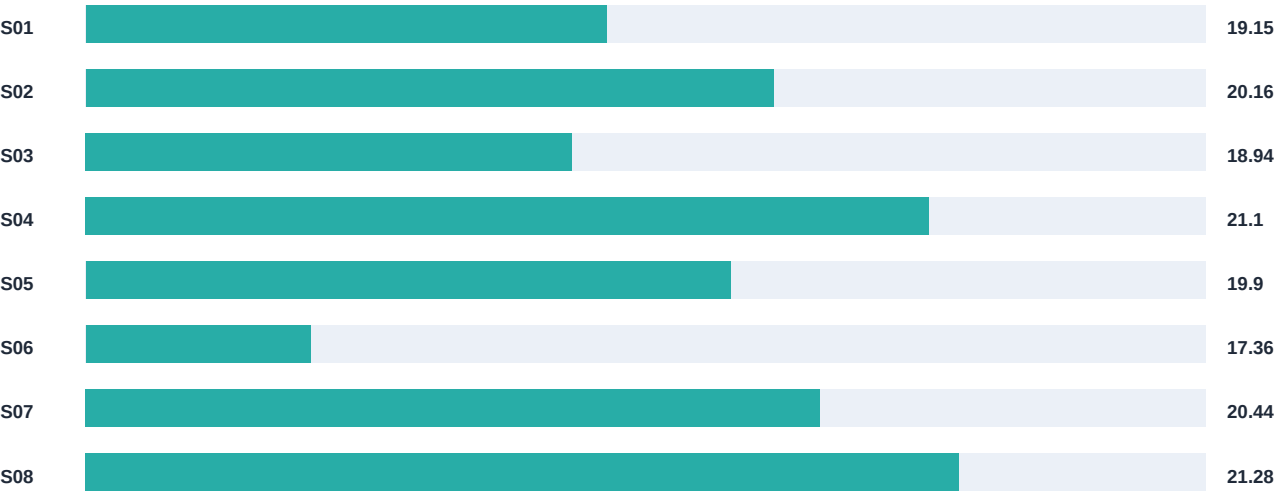

Layer order is valid. Recipe quantities and units are explicit. Glovebox humidity and filtration time remain under researcher review.

Editable Measurement Table

Values are prefilled from the local project and remain editable in this PDF copy.

SAMPLE	FORMULATION	VOC	JSC	FF	PCE	STABILITY
--------	-------------	-----	-----	----	-----	-----------

PCE comparison (snapshot at export time)

Important

Editing PDF fields changes this report copy only. Charts and deterministic summaries remain export-time snapshots; recalculate them in the XLSX workbook after changing measurements.

AI-Assisted Findings (Simulated)

96	FA0.90MA0.10 is the strongest candidate Evidence: S04, S08 7 metrics Status: accepted
91	S06 is a multi-metric outlier Evidence: S06 IQR + robust z Status: review
88	Batch effect is smaller than formulation effect Evidence: Grouped comparison Status: accepted

EDITABLE RESEARCHER FIELDS

Conclusions

Limitations

Approval / signature state

Provenance: raw, calculated, researcher-authored and simulated AI evidence remain distinct.
